

AI All Around

Artificial intelligence (AI) Basics

Predictive AI

- Rigid human-programmed set of algorithms
- Cannot adapt to new information
- Helpful for finding patterns and predicting outcomes

Generative AI (GenAI) □

- Machine learning: open set of algorithms that learns from large amounts of data
- Adapts to new data and situations
- Great for generating new content

What GenAI Tools Can Do For You

- Respond to complex questions instead of searching based on key words.
- Learn from your responses to provide information customized to your needs.
- Summarize long documents, product reviews, lists of web results, etc.
- Generate content like text, images, audio, and video.
- Have a friendly chat with it!

Sample Apps and Their AI Tools

Adobe	
Canva	
Zoom	
Search Engines	  

GenAI & Privacy

- GenAI collects data from your prompts to learn how to respond to your requests.
- Clearing chat history only erases from your view.
- Don't share personal information when using AI tools.
- Remember that you can choose to use apps/programs without using AI tools.
- Opt out of AI Training in Settings.
